

Smile Makeover

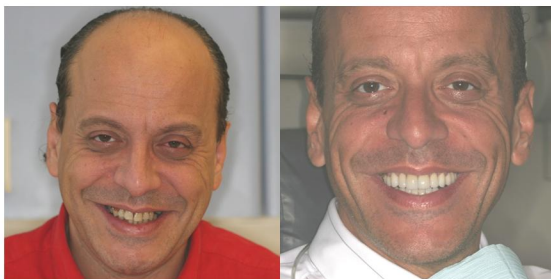

The procedure known as a “smile makeover” has revolutionized cosmetic dentistry.

You will be surprised to learn that no matter what problems you may have with your smile, it can be quickly and comfortably transformed to give stunning results.

A well balanced face is a key factor in what is considered to be attractive—a balanced smile with teeth aligned with the shape of the mouth makes a smile more attractive.

Every patient is unique and so is every smile. Our philosophy is to enhance the beauty and not create an artificial generic look. There are many elements that go into creating the perfect smile:

- Crooked and overlapping teeth
- Discoloured or stained teeth
- Gaps
- Chipped, broken and worn teeth

Face Shape

The shape of the teeth can influence perceived face shape. A round face can be made to look slimmer. Square masculine features can be also be softened to create a more feminine look just by altering the shape and arrangement of teeth.

Tooth Size

Long teeth give an illusion of youth as short teeth are associated with age because of wear and tear.

Smile Makeover

Tooth Colour

The whiter the teeth, the younger the patient. To achieve a more youthful look, the dentist whitens the teeth a couple of shades.

Lip Shape

The top portion of the lip can be thickened to make it appear fuller and more sensual. When the top lip is pushed out wrinkles, laugh line and smokers lines are diminished.

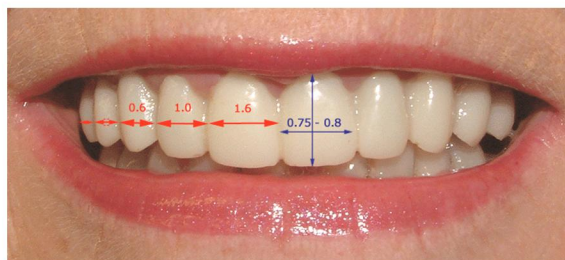

It's all about symmetry and proportions:

What is considered beautiful has a lot to do with balance and symmetry between various elements. Ideally the lateral incisor is 60% of the width of the central incisor. The canine should be 60% of the width of the central incisor. This is often referred to as Golden Proportions (1:1.6)

Harmonisation:

We aim to harmonise various features of the teeth with parts of the face for instance, the gum line looks more aesthetically pleasing when it is harmonised with the upper lip. We also harmonise the lower lip with the tips of the teeth. When features of the face are in harmony it subliminally affects the perceived attraction because harmonised shapes are more pleasing to the eye.

At Thurloe Street Dental Group we use advanced technology known as a Diode Laser which reshapes the gum line in an instant and without any discomfort.

The Smile Makeover has many benefits:

- **Health and hygiene benefits:** Teeth that are properly aligned do not wear down as quickly. There is less stress as teeth are not impacting on each other. Teeth are easier to clean, gums are healthier and therefore there is less risk of decay and infections that result in decay.
- **Psychological benefits:** Almost all adults (99.7%) believe a smile is an important social asset. Smile Makeover results are life changing! Patients report a surge in confidence. We take pride in our "artistic" abilities and are often touched by the patients' reaction when they see their new smile for the first time.

This procedure has been called the "scalpel free face lift" and there is are no incisions or general anaesthesia required. Therefore the procedure is short, pain free, non invasive and does not require any recovery time.

**We offer attractive finance packages tailored to suit every budget.
