

## Accelerated Tooth Whitening

At Thurloe Street Dental group we offer a revolutionary and advanced tooth whitening system that returns your smile to its natural lighter shade in one comfortable appointment\*

**Q: What makes the Accelerated Tooth Whitening system different from other systems being used today?**

A: The Accelerated Whitening System relies on all the universally accepted whitening principles: Hydrogen peroxide, visible light, heat, pressure. These work in synergy to give the most effective results ever experienced! The whitening trays used with this system are custom designed for patients to fit them snugly. This means that all the oxygen bubbles are sealed in and saliva is sealed out. This makes the system very effective.

**Q: How white will my teeth get?**

A: The Accelerated Tooth Whitening system has shown it can whiten teeth by up to 10 shades. It can brighten your teeth dramatically! Not all results are the same. Results will vary due to factors such as tooth density, tooth porosity, and lifestyle habits. Most people will brighten their teeth substantially with just one treatment.

**Q: Will my crowns, veneers or fillings get whiter?**

A: the actual colour of the porcelain will not change but topical stains will be removed effectively.

**Q: How does it work?**

A: The dentist creates a custom built tray for you. The gel is applied to your tray which is fitted onto your teeth. Accelerated Tooth Whitening system is connected to the tray and the heat activates the gel. After 60 minutes your teeth will have dramatically brightened. The active ingredient that we apply is hydrogen peroxide, which has been used in dentistry for over 100 years, and proven to be completely safe.

**Q: How long should my whitening last?**

A: Your Accelerated Whitening smile can last up to 3 years. However everyone's habits and lifestyles vary and the use of tobacco, regular drinking of red wine, coffee, or tea will affect how long your results will last. Regular visits to one of the hygienists at Thurloe Street Dental Group will ensure your new bright smile is maintained.

**Q: Is there any pain or discomfort with this treatment?**

A: There shouldn't be any discomfort. Although in some cases there might be slight sensitivity but it will last only a day or two

**Q: Is it Safe?**

A: Yes. The Accelerated Whitening gel formula will not harm the enamel on your teeth and will not effect your existing fillings.

According to a recent poll tooth whitening has increased by over 300% in the past five years!
